Operon Promoter Landscape

Operon	Strand	Operon start	Operon end
yhiM	+	3632864	3633916

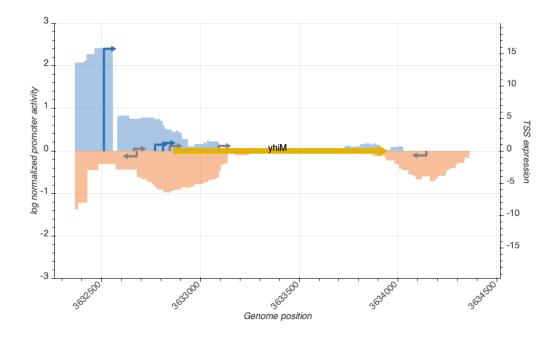

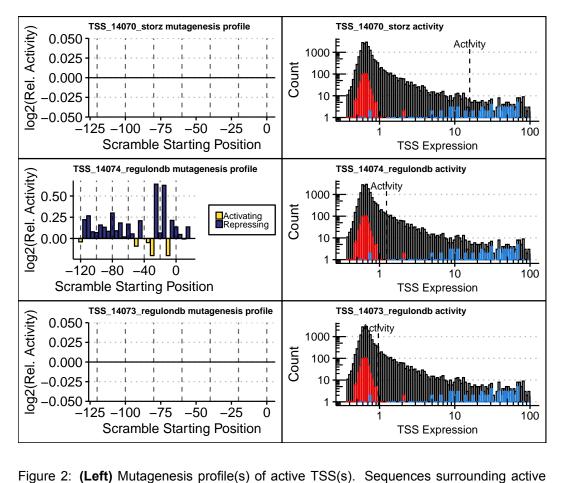

Figure 1: **Promoter activity in rich media (LB) surrounding query operon**. 17,767 previously reported TSSs were evaluated by measuring the promoter activity (right Y-axis) of the 150 bp surrounding the TSS (-120 to +30) to determine which were active or inactive. The genome-wide promoter activity (left Y-axis) was determined by measuring expression of over 300,000 genomic fragments spanning the *E. coli* genome and averaging promoter activity at all nucleotide positions in a strand-specific fashion. Genome coordinates corresponds to *E. coli* genome version U00096.2.

TSS Summary

TSS name	TSS position	Strand	TSS activity	Category
TSS_14075_regulondb	3632840	+ + + + + + +	0.7719226	inactive
TSS_14070_storz	3632507		15.7735025	active
TSS_14072_storz	3632673		0.8306863	inactive
TSS_14074_regulondb	3632806		1.2380188	active
TSS_14071_regulondb	3632658		0.3332019	inactive
TSS_14073_regulondb	3632766		0.9650385	active

TSS Scanning Mutagenesis

TSSs were systematically mutated to identify regions controlling expression. Bar height indicates the relative change in promoter activity as a result of scrambling nucleotides within 10 bp regions at 5 bp intervals spanning the promoter. Bar color identifies the region as a putative activator (yellow) or repressor (purple). (**Right**) Dashed line indicates the expression of the indicated TSS relative to all tested TSS sequences. The distributions of expression is shown for all tested TSSs (black), 500 negative controls (red), and a set of constitutive promoters from the BioBrick registry (blue).
