Operon Promoter Landscape

Operon	Strand	Operon start	Operon end
shiA	+	2051667	2052983

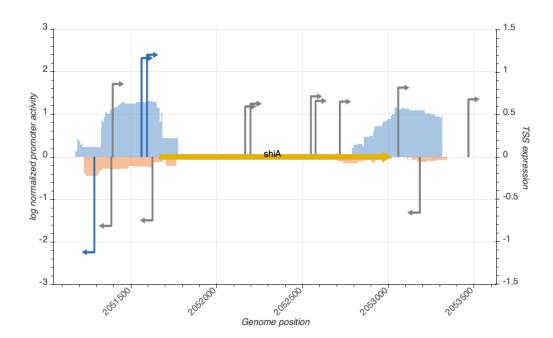

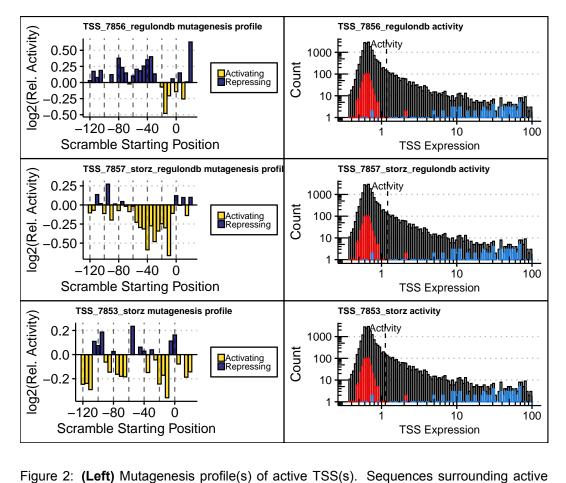

Figure 1: **Promoter activity in rich media (LB) surrounding query operon**. 17,767 previously reported TSSs were evaluated by measuring the promoter activity (right Y-axis) of the 150 bp surrounding the TSS (-120 to +30) to determine which were active or inactive. The genome-wide promoter activity (left Y-axis) was determined by measuring expression of over 300,000 genomic fragments spanning the *E. coli* genome and averaging promoter activity at all nucleotide positions in a strand-specific fashion. Genome coordinates corresponds to *E. coli* genome version U00096.2.

TSS Summary

TSS name	TSS position	Strand	TSS activity	Category
TSS_7856_regulondb	2051558	+	1.1658823	active
TSS_7857_storz_regulondb	2051590	+	1.2054367	active
TSS_7858_storz	2051622	-	0.7485293	inactive
TSS_7855_storz	2051390	+	0.8607383	inactive
TSS_7853_storz	2051283	-	1.1250306	active
TSS_7854_storz	2051382	-	0.8144791	inactive

TSS Scanning Mutagenesis

TSSs were systematically mutated to identify regions controlling expression. Bar height indicates the relative change in promoter activity as a result of scrambling nucleotides within 10 bp regions at 5 bp intervals spanning the promoter. Bar color identifies the region as a putative activator (yellow) or repressor (purple). (**Right**) Dashed line indicates the expression of the indicated TSS relative to all tested TSS sequences. The distributions of expression is shown for all tested TSSs (black), 500 negative controls (red), and a set of constitutive promoters from the BioBrick registry (blue).
