Operon Promoter Landscape

Operon	Strand	Operon start	Operon end
wzzB	-	2096325	2095345

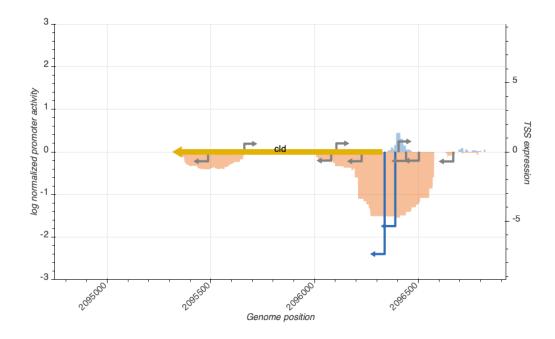

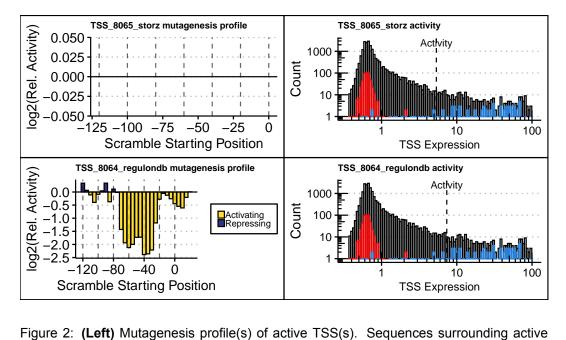

Figure 1: **Promoter activity in rich media (LB) surrounding query operon**. 17,767 previously reported TSSs were evaluated by measuring the promoter activity (right Y-axis) of the 150 bp surrounding the TSS (-120 to +30) to determine which were active or inactive. The genome-wide promoter activity (left Y-axis) was determined by measuring expression of over 300,000 genomic fragments spanning the *E. coli* genome and averaging promoter activity at all nucleotide positions in a strand-specific fashion. Genome coordinates corresponds to *E. coli* genome version U00096.2.

TSS Summary

TSS name	TSS position	Strand	TSS activity	Category
TSS_8066_regulondb	2096401	+	0.7552345	inactive
TSS_8067_regulondb	2096437	-	0.6472584	inactive
TSS_8069_storz	2096665	-	0.6850256	inactive
TSS_8068_regulondb	2096499	-	0.6326685	inactive
TSS_8065_storz	2096385	-	5.3518314	active
TSS_8064_regulondb	2096334	-	7.3654615	active

TSS Scanning Mutagenesis

TSSs were systematically mutated to identify regions controlling expression. Bar height indicates the relative change in promoter activity as a result of scrambling nucleotides within 10 bp regions at 5 bp intervals spanning the promoter. Bar color identifies the region as a putative activator (yellow) or repressor (purple). **(Right)** Dashed line indicates the expression of the indicated TSS relative to all tested TSS sequences. The distributions of expression is shown for all tested TSSs (black), 500 negative controls (red), and a set of constitutive promoters from the BioBrick registry (blue).
